Part 1:

        Comment out line 68 on the template

Part 2:

        Enable line 68 on the template (there is no indication that bees see anything)

Part 3:

        Remove comment from line 65 of the template

Part 4:

        Change nothing

Part 5:

        Remove comment on line 102 of basic bee

Note:

        To see the scoutBee run properly comment out lines 53 and 54 of scout bee and remove the comments blocking out lines 36 through 50. Without removing this the bee snaps to face the next bee rather than smoothly turning towards it.
